

Training Course Descriptions

The Introduction to AxisTV Training Course is a prerequisite for our web based training courses.

Introduction to AxisTV

Objectives: Introduction to AxisTV introduces users to their AxisTV System. Users learn key concepts in digital signage such as aspect ratio and resolution and how those are related to the messages they create for display in their AxisTV systems. Users also learn how to access their system, how to get help in the system, and how to access and use their system tools.

Participants: Everyone who is new to digital signage and/or to the AxisTV Digital Signage System should attend this training.

Schedule: A one hour course held bi-weekly

AxisTV Desktop

Objectives: Introduction to AxisTV focusses on using four key AxisTV tools: Free Form Editor, Template Editor, Display Layout Editor and Media Importer. These tools allow users to create highly customizable messages and message templates, to create layouts to display messages and other content, and to import large files for use in the AxisTV Digital Signage System.

Participants: Everyone who creates messages or message templates and designs layouts for digital displays should attend this class

Schedule: A ninety minute course held bi-weekly

Content Creation Training

Objectives: Content Creation introduces users to the AxisTV browser-based interface. Users learn how to quickly and easily create dynamic, eye-catching content for their audiences using a variety of web tools including: Simple Message, Message from Template, and Event Management Messages.

Participants: Anyone who will create AxisTV content should attend this course.

Schedule: A one hour course held bi-weekly

Managing Content Training

Objectives: Managing Content teaches users how to access, organize, modify, and delete content in AxisTV. Users learn how to import images, videos, and audio files through the web interface. They also learn how to manage the background library where all of the layout backgrounds and message backgrounds for the AxisTV system reside.

Participants: Anyone who will create or approve message content should attend this training.

Schedule: A one hour course held bi-weekly

AxisTV Training Course Descriptions

System Administration Training

Objectives: System Administration examines how AxisTV works from a hardware, software, and networking perspective. Participants learn what is required to get an AxisTV system up and running. They also learn how to perform various administrative and maintenance tasks.

Participants: Anyone who will be managing the AxisTV System at the administrative and/or technical level, including hardware, software, and network support should attend System Administration training.

Schedule: A one hour course held weekly

Configuring Users & Settings Training

Objectives: Configuring Users & Settings teaches users how to administer system configuration and security options within the AxisTV user interface. Participants learn how to create, edit and delete users and roles. They also learn how to manage the appearance of and set defaults for various system functions.

Participants: Participants who will manage user accounts and configure system options should attend Configuring Users & Settings training.

Schedule: A one hour course held weekly
